Cypress, TX 77429 | (832)-858-7809 | [singh.robby13@gmail.com](mailto:singh.robby13@gmail.com) | [github.com/robby-13](https://github.com/robby-13)

## Education:

General Assembly

April 2022 –

- Software Engineering Immersive Certification

University of Houston, Houston, TX

- B.S. in Sociology, Minor in Computer Science December 2021
  - o Related coursework:  
Computer Science and Programming (Python); Introduction to Programming (C++); Programming and Data Structures (C++); Computer Organization and Architecture; Interactive Computer Graphics; Introduction to Computer Networks; Programming Languages and Paradigms

## Skills:

- Languages: C++, Python, JavaScript, Java, Kotlin, Scala, HTML/CSS, SQL
- Frameworks: Flask, Django
- Version Control: Git, GitHub, SVN
- Technology: Visual Studio Code, CLion, PyCharm, IntelliJ IDEA, Python IDLE, MySQL, SQLite, SQLAlchemy, Gradle, Atom, Postman, TortoiseSVN, Wireshark, PuTTY, Microsoft Office

## Personal Projects:

- Python REST API with Flask:
  - o Flask REST API built inside a Python Virtual Environment that follows the CRUD API principles: Creates, Reads, Updates and Deletes data.
  - o Program focuses primarily on products, SQLAlchemy handles each product item and organizes them in terms of product ID, name, description, price, and quantity.
- Polls App with Django:
  - o Django REST API built inside a Python Virtual Environment that follows the CRUD API principles.
  - o Web application that works on both a client and administrator interface. Clients are able to access a webpage where they can cast votes on a series of polls and view the results immediately. Administrators have the ability to access/update/delete both questions and answer choices as they please.
- Domain Specific Language Project (Kotlin):
  - o Internal DSL written in Kotlin that organizes a meeting based on the following details: meeting name, start and end times, date, and participant(s) roster.
  - o Project was completed by a two-person team and created in a Gradle build environment with the IntelliJ IDEA IDE. Alongside the main file is a test file with a series of unit tests to verify the desired output for each line of the DSL.
